# **WHEN DOING IT RIGHT MATTERS- IPPC TECHNOLOGIES**

## **IPPC's Services**

IPPC's technologies are developed for the specific and sole purpose of managing high-risk computer, device, and internet users. From inception, IPPC's solutions have been developed using feedback and design requirements garnered from field supervisors, judicial educators and administrators.

The results are tools that allow supervision officers to monitor and manage a user's activity. Courts prefer IPPC's patented processes for capturing, transmitting, and preserving evidence, which meet rigorous chain-of-custody requirements.

Officers have 24/7 remote access to their portal from any Internet-connected device. From their portal, officers can review data, configure controls, alerts, and various other settings. Easy interaction with the data allows officers to sort for quick analysis and save for an investigation. Inappropriate activities can be audited and compiled into a court-ready to report.

**Interested in learning more about IPPC and seeing a demo of Impulse Control®?**

Sign up for a FREE Cyber Supervision Webinar and learn how probation, parole and pretrial agencies are using IPPC's technologies to remotely manage the computers, devices, and Internet activities of sex offenders, hackers, copyright infringers, child pornographers and other cyber criminals.

## **IPPC's Solutions**

### **Impulse Control®**

Since 2002, IPPC's Impulse Control has been recognized as the benchmark solution for remote computer, device, and Internet management. It provides the ability to manage offenders' activities from the safety and convenience of your office. Impulse Control® provides monitoring, filtering, blocking, alert notifications, easy navigating, reporting, and much more...

### **Express Scan**

Whether scanning a Windows or Mac computer prior to installing Impulse Control®, or performing spot-checks, Express Scan is the quickest and easiest tool available. It scans applications, documents, pictures, videos, emails, browser histories, and more. Compatible with Windows XP and newer, as well as macOS Yosemite and newer.

### **SafePhone**

Does your client need a phone that can't access the Internet? The SafePhone solution provides phones and plans (calls or call and word texting) with no Internet access or camera. Plans are fully managed by IPPC. No contracts. Calls are not recorded. Call, text, and GPS logs are available through the portal. No subpoenas or court-order required.

### **SecureLearn®**

A safe, secure, locked-down Internet access platform for secure facilities. SecureLearn® reduces recidivism by restricting Internet access only to educational and skill building resources. Both the students and the facility are safe. Users achieve current and competitive certifications in preparation for their release. The platform is configurable to achieve the agency's goals.
